

# Analytics and Communications Solutions

**Verint® Analytics and Communications Solutions help government and law enforcement agencies neutralize threats from terrorists and criminals who exploit today's highly advanced and readily accessible communications networks.**

Verint solutions access voice and data from virtually any wired, wireless, or broadband communication network, using sophisticated probes, filters, and analytics to generate Actionable Intelligence® and help build evidence. Built on Verint expertise deploying interception applications in over 70 countries across the globe, these solutions are reliable, scalable, and cost-effective – engineered to address communication technologies today and those that emerge tomorrow.

**Actionable Intelligence® for a Safer World™**

**VERINT**

POWERING ACTIONABLE INTELLIGENCE®

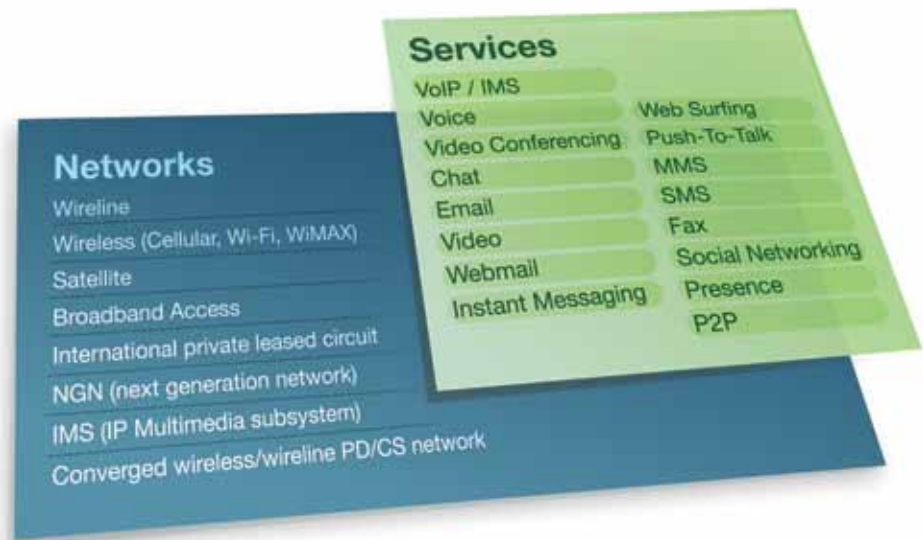

# A Global Leader in Actionable Intelligence Solutions

Our lawful interception solutions are compliant with ETSI and CALEA regulations, as well as other regional and national standards governing lawful interception activities.

## End-to-End Strategic and Tactical Solutions

Verint offers a wide range of diverse and sophisticated end-to-end intelligence solutions for a broad selection of strategic and tactical interception activities - from robust centralized systems to flexible, portable solutions. Sophisticated analytics help handle the huge volume of information and secure information sharing capabilities enable the export of processed intelligence to multiple agencies and departments.

Our systems and technologies cover a full range of interception activities, including full monitoring centers for warrant-based, target, and mass interception, tactical systems for covert field operations, COMINT and probes for passive monitoring, advanced location solutions for real-time tracking, and WEBINT.

Verint solutions work with virtually any network and communication service.

## Tailored to Your Organization

Verint's scalable and modular solutions enable organizations to contend with the continual growth in communication volume and evolution of networks, technologies, and criminal behavior. Further, open architecture facilitates integration with existing hardware and software solutions to reduce the overall cost of investment. Tailored to your organization's workflow and methodology, Verint offers fully localized solutions to the following markets:

- Law Enforcement
- Intelligence Agencies
- National Security
- Communication Service Providers
