

ENGAGE PDA

Verint ENGAGE PDA delivers intelligence to field teams in real time, promoting safety, efficiency, and more successful outcomes.

Real-time, Portable, Tactical Workstation

Verint® ENGAGE™ PDA is a real-time, portable, lightweight, tactical workstation that places the full power of Verint interception, monitoring, and analysis capabilities in the hands of law enforcement and other government agents, wherever they are: in the field, in the office, at home or on patrol. The handheld ENGAGE PDA enables field agents to see the most recent location of target mobile subscribers and other agents in real time and target and investigation information at any time.

ENGAGE PDA interfaces with VANTAGE® and RELIANT™ monitoring centers and the X-TRACT® investigation and analysis system to help law enforcement and government agents perform the following activities in the field:

- **Track Targets' Recent Location:** Track and monitor the movements of one or more targets on dynamic, detailed maps during surveillance and pursuit.
- **Monitor Target Information:** View target, case, or location (point of interest) information from VANTAGE, RELIANT, or XTRACT.
- **Collect and Deliver Information—anywhere, any time:** Gather, annotate, photograph, record, and disseminate intelligence as it becomes available.
- **Receive Real-time Alerts in the Field:** Take rapid, effective action.
- **Track the Field Team – Big-Picture Decision Making:** View field staff locations, and communicate information on the fly in rapidly changing field conditions.
- **Send a Distress Message:** Send distress calls and current location by clicking the SOS button.

Actionable Intelligence® for a Safer World™
